

EX. No.2a CREATION OF WEB PAGE USING HTML

Aim

To create a web page using HTML

Description:

A Short description about the various pages of the web application

The following tags must be incorporated in the web page:

1. Text formatting tags
2. <table> tag with borders and proper spacing, spanning and padding
3. <form> tag with all types of input boxes(Text, Submit, Reset, Checkbox, Radio Buttons, Text area, Select)
4. Use of <meta> tag
5. Insert an image using tag and use <map> tag and create four hot spots(circle, square, rectangle, polygon), that show all the related information when the hot spots are clicked
6. Create a frame with table of contents on the left side of the window, and have each entry in the table of contents use internal linking to scroll down the document to the appropriate subsection.
7. Use <a> tag to link web pages & Internal hyper linking
8. Ordered and unordered list
9. Include HTML 5.0 tags (Audio, Video, Form creation, Canvas API, SVG, and Geo location)
